Super Durable Corrosion Resistant Coatings

Super Durable Corrosion Resistant Coatings

For years, a dual-coat system has been the answer to getting both high corrosion resistance and exceptional UV protection on a part. This consists of a primer designed to give you the corrosion protection you need, however, unfortunately, has very poor UV protection. Therefore, a top-coat polyester system is required to extend your UV protection for color stability and gloss retention, which can be costly.

Fortunately, Vitracoat offers a one-coat system that performs like a two-layer powder coat system. The Vitracoat SDCR (super durable corrosion resistance) technology actually gives you the ability to achieve exceptional corrosion resistance and outstanding UV protection in just one step.

This NEW SDCR technology has the properties built into a one-layer system for both aluminum and steel applications that provides excellent adhesion characteristics and edge protection needed for enhanced corrosion resistance. Additionally, it allows you to reach outdoor durability that can exceed AAMA 2604 weathering performance.

Ideal Applications

- Construction Equipment
- Trailers
- Outdoor Furniture
- Wheels
- Garden Equipment
- Lawn Mowers
- Outdoor Fencing
- Outdoor HVAC Applications
